

I am an XM Satellite radio listener and I am urging you to reject the NAB's petition 04-160. Satellite radio providers fill a need for long distance drivers by their delivery of locally oriented weather and traffic information. It enables me to get an understanding of the traffic and weather conditions in cities that I will travel through prior to reaching them. It is my belief that this service is not a threat to the livelihood of NAB members and as such they have no grounds for a petition to limit or stop XM and other satellite providers from delivering this information. Also, as a U.S. citizen I feel I have the right to decide from whom I get this type of information and I choose satellite radio. Again, I urge you to reject petition 04-160.

Respectfully,
Vic Rosser
